Dear Families,

Volcanoes research has been a focus for many in both Preschool groups. Last week we made volcano models, sketched our impressions of them – complete with lava and made our own volcanic eruption! We used a vase, with bi-carb soda in the bottom, then we added red food dye, detergent and vinegar! A fun activity to recreate at home too? It was an amazing sight and we will be sure to investigate more science experiments over the coming weeks.

Please help us support children’s emerging nose blowing skills, by donating a box of tissues ahead of winter runny noses. We are talking often about the importance of blowing, rather than sniffing as ear infections and even permanent hearing loss can result from constant sniffing. We are teaching children to ‘catch it, bin it and then kill it’ which means blow, put tissue in a bin and wash hands.

DATES FOR YOUR DIARY

Thursday 25th June – LAST DAY TERM 2
Tuesday 14th July – FIRST DAY TERM 3

We wish all a great weekend. Love Lyndal and Andrea.
Dear Families,
